

Blocksize Capital

Institutional API Documentation

1. SYSTEM ARCHITECTURE

The Blocksize Gateway is a multi-layered infrastructure designed for automated machine-to-machine data settlement.

The Blocksize Gateway is a multi-layered infrastructure designed for automated machine-to-machine data settlement.
(Internal Network Diagram omitted for security).

Blocksize Capital

2. OPERATIONAL PROCESS

Each request follows a strict verification and settlement flow via the Iron Dome security layer.

Each request follows a strict verification and settlement flow via the Iron Dome security layer. Refer to the internal documentation for the full operational sequence.

3. AUTHENTICATION MODES

- Direct HTTP: use an official signed x402 v2 PAYMENT-SIGNATURE.
- Connectors: sign in through the supported OAuth flow to use an eligible starter-credit allowance. Caller-selected identity headers do not grant production credits.
