

Blocksize Capital

Agent Integration Guide

1. ACCESS REQUIREMENTS

Direct HTTP clients use an official signed x402 v2 payment flow. Eligible OpenAI, Claude, and Cursor connector users authenticate through OAuth to use a starter allowance. Raw wallet and caller-selected identity headers do not grant production credits.

2. AUTOMATED DISCOVERY

Fetch the MCP Discovery Manifest at `/mcp/manifest.json` to receive full tool definitions and JSON-schema parameters.

3. HTTP INTEGRATION

Request a paid route, parse its PAYMENT-REQUIRED challenge with an official x402 v2 client, then retry the exact request with PAYMENT-SIGNATURE. For sustained authenticated access, contact Blocksize about an account plan.
